

Convenient plastic closures

Biofoods Pvt. Ltd., India, has joined hands with Kwik Lok, a leading manufacturer of plastic bag closing systems. Biofoods is offering a plastic bag closing system that caters to food packaging requirements. The Kwik Lok bag closing system comprises bag closing equipment/applicator machine and plastic clips/closures. The bag closing machines range from simple hand-operated semi-automatic models to high-speed, hi-tech assembly line units, which are fully automatic and can handle up to 110 bags/minute. The machines are easy to operate and adaptable to all types of bagging machines/systems. Clips/closures are made using food-grade polystyrene, which helps retain their original shape, ensuring convenient reuse.

The system also facilitates printing of “manufacturing date/use by date/best before date” on the clips or closures at the time of packing. Other information such as price, code, batch, etc. can also be printed on the closures. Biofoods also offers a range of machines, which have typical applications in snacks, vegetables, meat, courier, spare parts, milk packing and many other industries.

Recent studies have shown that consumers now increasingly opt for food packages that are easy to open and easy-to-reclose bottles that preserve the beverage’s effervescence. Recloseability ranks high on the list of consumer food packing requirements. *Contact: Biofoods Pvt. Ltd., 4, Community Centre, Laurence Road, Industrial Area, New Delhi 110 035, India.
