

## **New system to produce juice concentrate**

Westfalia Separator Food Tec GmbH, Germany, has developed Frupex® technology to produce juice concentrates. A leading fruit juice manufacturer is scheduled to install this technology for producing apple juice concentrate. At the core of the new installation is the Frupex line with five decanters (type CB 505) for juicing, two self-cleaning clarifiers (type SC 150) for clarifying the juice and a decanter (type CD 305) for processing the retentate. Westfalia will also integrate an evaporator installation, a mash heater and a membrane filtration facility in the process.

The new installation will extract juice from apples (up to 30 t/h) and in the second stage process solids discharged from the cloudy apple juice line that started operation two years ago. Three decanters (type CD 505) are already being used in this line. *Contact: Westfalia Separator Food Tec GmbH, Werner-Habig-Straße 1, D 59302 Oelde, Germany.
