

Automatic double clipper

Poly-Clip System Corp., the United States, offers its latest FCA 3441 automatic double clipper that can be mechanically coupled and electrically synchronized with filling machines. Sausages up to 65 mm, in special cases even larger, are clipped with 12 and 15 mm clips. Artificial and collagen casings as well as special natural round casings can be used with this system. The unit can be set up for different clip spacings.

For suspending chubs or sausages in a string, loops are clipped with an automatic looper (GSA). An electronic control panel contains all the basic functions including a counter that can be pre-set for a number of sausages in a string up to a maximum of 15, at the end of which a loop is applied. It also has several control dials that allow variation in delay times between portions and casing brake pressure during operation. The control panel also features indicator lights and gauges for machine functions and safety. *Contact: Poly-Clip System Corp., 1000, Tower Road, Mundelein, Illinois 60060, the United States.
