

## **Aseptic additives**

Arom Pak AB, Sweden, has developed a system that enables flexible aseptic addition of small and accurate amounts of precious additives. The system is built for aseptic bags filled with liquid additives that function as batch units. It is designed for use in the food and pharmaceutical industries for additives such as flavourings, vitamins, enzymes, bacteria, other functional ingredients and carbon dioxide or for the addition of medical-chemical extracts. Compared with conventional methods, the new system excludes the risk of additive overdose while simultaneously reducing waste and improving quality.

Potential applications include production of functional foods using heat-sensitive additives, e.g. living bacteria and lactoferrin. *Contact: Arom Pak AB, Maskinvagen 5, SE 22730 Lund, Sweden. Tel: +46 (46) 235 050; Fax: +46 (46) 235 099. (Website: [www.foodoresund.com](http://www.foodoresund.com))*
