

Windmill for marine vessels and low-power applications

Ampair Natural Energy, the United Kingdom, is offering a wind turbine for installation on boats. Ampair Dolphin incorporates a three-blade vertical rotor fabricated utilizing extruded aluminium. Unlike their propeller counterparts, the blade edge speed on these machines cannot exceed wind speed, thereby enabling safe operation. The 4 W lightweight unit can be moved from mast mount in summer to deck mount in winter to continue charging, eliminating the need to remove heavy batteries. An optional rail mounting kit is available along with this multi-directional unit.

The smooth-running Ampair Dolphin has a long life, is moderately priced and ensures safe operation. It is ideal for installing on moored boats, parked caravans and vehicles, remote monitoring sites, low power navigation lights, etc. *Contact: Ampair Natural Energy, The Doughty Building, Crow Arch Lane Ringwood, Hants BH24 1NZ, the United Kingdom.
