

New alternative for halon-1211

American Pacific Corporation, based in the United States, has developed a clean fire extinguishing agent as a substitute for halon-1211 in streaming applications. Halotron™ I is a safe, effective, environmentally acceptable replacement for halon-1211. It is discharged as a liquid, which evaporates quickly. Its proprietary three-component chemical blend is based on HCFC-123, and is approved by the United States EPA under its Significant New Alternatives Policy (SNAP) programme.

The new product has been approved, among others, by the United States Federal Aviation Administration and the Coast Guard. Some application areas of Halotron™ I include: office buildings, automobiles, warehouses, manufacturing plants, laboratories, hazardous material storage areas, aircraft engine nacelles, aircraft flight lines, on-board aircraft, telecommunications facilities, railroad equipment, spacecraft facilities, etc. *Contact: American Pacific Corporation, Halotron Division, 3770 Howard Hughes Parkway #300, Las Vegas, Nevada 89109, the United States.
