

Substitute for aerosol blow torch technology

Cortec[®] Corp., the United States, has developed new, safe rust preventatives with the same handy convenience of spray can application. Without the limitations of aerosol technology, the new EcoAir[®] VCI 377 provides three times better rust protection. It eliminates potential fire hazards with a water-based, biodegradable formulation that acts like a fire extinguisher in the presence of a flame. The non-inflammable formulation can be stored anywhere and shipped safely by air. It provides twice the protection offered by leading rust preventative lubricants.

Cortec's VCI[®] patented technology delivers corrosion protection for hard-to-reach areas such as cavities and voids. On drying, it forms a thin, clear film and requires no removal, clean-up or hazardous disposal. By providing short- and long-term protection for both ferrous and non-ferrous metals, the product allows users to work with one rust preventative coating for all their protection needs. *Contact: Ms. Anna Vignetti, Cortec Corp., the United States.
