

Latest alternatives

Robert McKeown Company is offering a variety of new alternative solvents. A brief description of each product is given below:

- PowrClean: is a replacement for chlorinated solvents like 1,1,1-TCA. Based on stabilized n-propyl bromide, this cleaner is effective, eco-friendly and safe. It can easily remove fluxes and pastes, oils, grease, etc.
- Epoxy remover: is ideal for cleaning dispensing gear and misprinted boards. This low-VOC product also works on partially cured epoxies.
- ScreenClean: can be used on all types of screens to remove thick-film pastes. It speeds cleaning, improves quality and is safe for delicate emulsions.
- Axarel 2200: is a very active hydrocarbon used for defluxing and degreasing. It is combustible, bio-degradable and applicable for cleaning a wide variety of contamination and in cases where slow drying can be cost-effective.
- Heavy-duty flux remover III: an excellent degreaser and defluxer, it removes age-hardened fluxes, oils and grease. This non-inflammable product is suitable for vapour tanks.
- Bioact EC7M: This environmentally benign cleaner is made from ultra-pure “no rinse” citrus terpenes. It instantly attacks most adhesives which makes it ideal for removing labels and tape residues.
- OS-20 degreaser: is a great precision degreaser. It removes oils, grease, some inks and some fluxes.
