

Furniture from waste tyres and tubes

RA Innovations of India has developed technology to produce furniture using waste tyres and tubes as raw materials. This invention – protected through patents, design registration, trademarks and copyrights – provides a means to utilize waste tyres and tubes, thereby preventing this waste ending up in landfills. It offers several advantages: it is very durable, eco-friendly and cost-effective. The furniture range includes sofa sets, chairs, tables, mirror frames, clocks and other decorative items. These products offer a wood carving (groove) effect and are resistant to heat.

The product has won the prestigious Jawaharlal Nehru Memorial National Award for the “Best Research and Development” and “New Innovation Gold Award” for pollution control and energy conservation conferred by the International Greenland Society. *Contact: RA Innovations, G-194, Western Avenue, W-13, Sainik Farms, New Delhi 110 062, India.
